

PROFESSIONAL COURSE OUTLINE

Databricks

Platform Administration Fundamentals with Databricks

Program aligned

This program is built around Databricks platform administration fundamentals and prepares teams to operate workspaces more consistently across access, compute, governance, and operational controls. It is especially useful for organizations formalizing a shared Databricks platform operating model.

DELIVERY

Virtual, On-site, or Hybrid

DURATION

2 days

CERTIFICATION

Databricks Certified Associate Platform Administrator

AUDIENCE PROFILE

Who This Program Is For

Built for administrators who need to run Databricks workspaces with stronger identity, compute, governance, and operational controls.

PROGRAM SUMMARY

What This Course Covers

Databricks platform administration program aligned to workspace operations, identity controls, compute management, governance, and administrative monitoring.

TAILORED DELIVERY

Adapt the program around your team.

This outline can be adapted for virtual, on-site, or hybrid delivery, with emphasis adjusted for your team's platform priorities, role mix, and implementation goals.

Enterprise-ready delivery format

VNode ITeS can align labs, examples, delivery pace, and assessment checkpoints to the required audience profile while preserving the official program sequence where applicable.

COMPLETE MODULE SEQUENCE

Module Flow and Topic Coverage

The structure below presents the current delivery flow for this program, including the associated topics covered under each module.

Plan the next session

We can tune this outline around your delivery goals and team mix.

1

MODULE 1

Establish workspace administration foundations

Understand the core responsibilities, controls, and operating principles needed to administer Databricks workspaces effectively.

- Workspace administration foundations

2

MODULE 2

Manage identity and governance controls

Apply access and governance practices that support secure, usable, and scalable Databricks platform operations.

- Identity, access, and governance controls

3

MODULE 3

Administer compute and SQL resources

Control clusters, warehouses, policies, and operational standards to improve consistency and cost discipline.

- Compute, SQL warehouse, and policy management

4

MODULE 4

Run the platform with stronger operational discipline

Use monitoring, usage review, and platform-administration practices to support a stable Databricks operating model.

- Monitoring, cost, and operational administration
